

**Technical Specification Sheet****Woods Curved Vacuum Pads** IWGGR071

Suitable for lifting glass or other non-porous sheet materials with curved surfaces, these Woods Curved Pads can be easily fitted to any lifter in our Woods Powr-Grip range.

Made of softer rubber than standard Woods pads, these concave shaped pads have a thin edge profile which is able to mould to the curve of the load, making sure there is full contact with the surface so a vacuum can be created for safe lifting.

Please note that fitting curved vacuum pads to Woods lifters will reduce their lifting capacity to the following:-

- MRT4 and P11104 – 270kg
- MRTA6 and MRTA611 – 405kg
- MR1611 – 1080kg

A selection of hand cups and glass vacuum lifters specially designed for lifting curved or bent surfaces are also available from GGR Group.

Features

- 254mm diameter
- Sold individually
- Not suitable for use with thin, fragile materials
