

Technical Specification Sheet

Woods Heat Resistant Pads

[WGGR238]

Ideal for glass manufacturing applications such as removing glass from tempering ovens, the Woods Heat Resistant Pads provide a quick and simple solution for lifting in high temperatures.

As they are made from a heat resistant rubber compound, these specially designed vacuum pads are able to work in temperatures of up to 175°F without being damaged.

The pads can be easily fitted to any of GGR's Woods vacuum lifters, however please note that this will reduce the lifter's maximum lifting capacity by 50%.

Available to buy online, GGR Group also stock a range of red heat resistant slap on cups suitable for high heat applications.

Features

- 305mm diameter
- Sold individually
